This presentation will cover

CRITICAL THINKING

What is CT? Academic Definitions
Development & significance
CT applications & icons

MACAT

Who we are & what drives us
PACIER & how it works
The PACIER solution

The Skills Gap Crisis

Major trends

Talented pivotal person

From talent and pivotal people to skilled workforce.
The future will be about buying skills as and when you need them.

Skilled workforce

The Skills Gap Crisis

Major trends

Individual decision maker

From specialist individual decision making by functional demarcation to project based teams with diversified squads and tribes.

Squads & tribes

The Skills Gap Crisis

Major trends

Skills gap

From skills gap to a skills race.

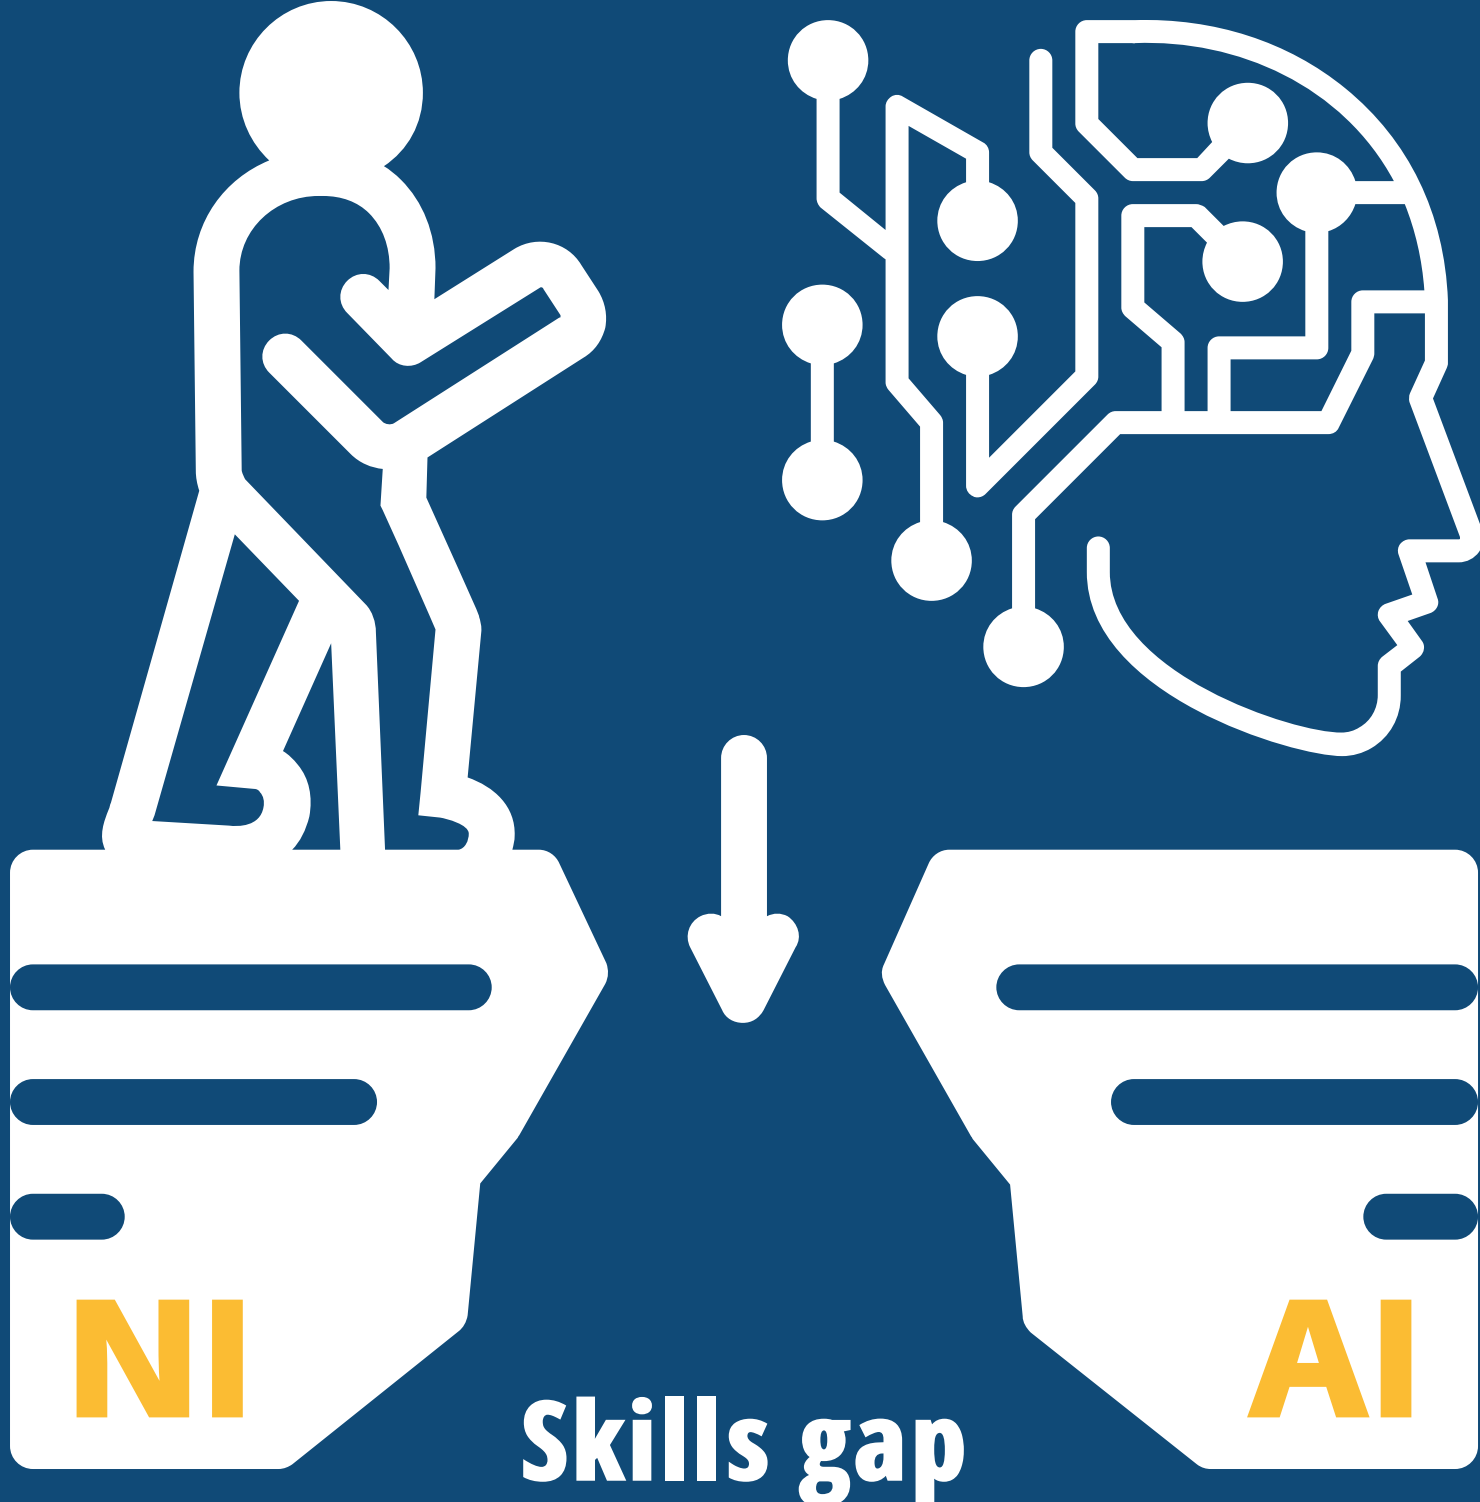

Skills race

The Skills Gap Crisis

Major trends

The intersection of natural and artificial intelligence will take us into an age of augmented intelligence and ultimately will lead us to autonomous artificial intelligence.

Future skills?

AAI

**Eric Schmidt, Executive Chairman
Alphabet Inc (Google's parent company)**

"We need critical thinking now more than ever. By 2020, most human beings will have access to the internet. When you have everyone harnessed with this information, the world gets more interconnected. It gets stronger. There's more knowledge sharing. There's more freedom and there's more openness. I've come to believe that science and Critical Thinking really do matter. Even more so now in the political world that we have in the United States and in other areas of the world."

**Julie Bisson, Executive Director, Assurance and People Leader
EY Channel Islands**

"In today's competitive market, hard skills such as technical ability and business insight define a person and are crucial for career success. However, what is often overlooked is just how vital a person's soft skills can be in securing, maintaining and progressing a successful career. In a business environment, soft skills include an aptitude in communication, presentation, professionalism, time management, team-work and Critical Thinking."

**Reid Hoffman, Founder
Linkedin**

"The analytical thinking skills I learned have made me a better investor and entrepreneur. My unusual educational background has proven quite helpful throughout my career. My favorite philosophers are Aristotle, Friedrich Nietzsche, and Ludwig Wittgenstein, and studying them has proven useful in two ways. It honed my Critical Thinking & gave me a deeper insight into human nature"

**Andreas Schleicher, Director for Education and Skills,
Organisation for Economic Co-operation and Development**

"Macat offers an amazing first-of-its-kind tool for interdisciplinary learning and research. Its focus on works that transformed their disciplines and its rigorous approach, drawing on the world's leading experts and educational institutions, opens up a world-class education to anyone."

A brief introduction to CT

WHAT IS CRITICAL THINKING?

Dispositions and Skills

Philosophy

The philosophical approach views the critical thinker as an ideal type, focusing on what people are capable of doing under the best of circumstances. In this view a critical thinker manifests “perfections of thought” by being inquisitive in nature, open-minded, flexible, fair-minded, has a desire to be well-informed, understands diverse viewpoints, and is willing to both suspend judgment and to consider other perspectives.

Education

The educational approach focuses on a hierarchy of information processing skills, with comprehension at the bottom and the three higher-order thinking skills (analysis, synthesis and evaluation) representing critical thinking.

Psychology

The psychological approach focuses on how people actually think versus how they could or should think under ideal conditions. They define critical thinking by the types of actions and behaviors critical thinkers do.

Critical thinking definition

The component skills
Of analyzing arguments, making
inferences using inductive or
deductive reasoning, judging or
evaluating, and making decisions
or solving problems.

**Not innate as
it can be taught and can
be improved as a tool that
helps us to draw effective
conclusions and make better
decisions**

Why is critical thinking important

It matters because

**It is the foundation of all
real-life skills with many
practical applications in
a world that is rapidly
changing with no jobs for
life**

**It helps us
learn and work better
as we minimise errors
and maximise success
by being adaptable and
capable of tackling new
challenges.**

Who we are

Macat is a world leader in critical thinking solutions that transform the way people learn, work and live.

What we believe

We believe that better thinking creates better and more equitable societies

Macat's definition of critical thinking

The component skills
Of **problem-solving, analysis,
creative thinking, interpretation,
evaluation and reasoning, a 21st
century skills definition**

P A C I E R

The PACIER Model is
a group of 6 skills and a number of sub-skills that could be used in combinations and sequence to create, develop and track critical thinking

Problem Solving
Producing strong solutions

**Asking productive
questions**

**Generating alternative
possibilities**

**Generating
solutions**

**Making sound
decisions**

Analysis

Understanding how an argument is built

**Working out the functions
of each part of an
argument**

**Understanding the
relationships between
parts of an argument**

**Showing the structure of
an argument**

**Looking for assumptions
in an argument**

Creative Thinking

Creating new connections and unexpected solutions

**Connecting things
together in a new way**

**Producing novel
explanations for existing
evidence**

**Generating new
hypotheses**

**Redefining an issue so as
to see it in a new way**

Interpretation

Looking at issues of meaning

**Seeking to clarify meaning
where necessary**

**Grasping the meaning of
technical terms**

**Understanding the
meaning of available
evidence**

**Highlighting problems of
a definition**

Evaluation

Exploring strengths and weaknesses of an argument

**Judging the acceptability
of the reason(s) used in
terms of readability**

**Judging the relevance of
the reason(s) used**

**Judging the adequacy of
the reason(s) used**

**Judging what would
strengthen or weaken an
argument**

Reasoning

Creating strong and persuasive arguments

Producing well structured arguments

Dealing with counter-arguments

Evaluating the reasoning of arguments

Looking at the need to persuade

Problem-solving Producing strong solutions	Analysis Understanding how an argument is built	Creative Thinking Creating new connections and unexpected solutions	Interpretation Looking at issues of meaning	Evaluation Exploring strengths and weaknesses of an argument	Reasoning Creating strong and persuasive arguments
Asking productive questions	Working out the functions of each part of an argument	Connecting things together in a new way	Seeking to clarify meaning where necessary	Judging the acceptability of the reason(s) used in terms of readability	Producing well-structured arguments
Generating alternative possibilities	Understanding the relationships between parts of an argument	Producing novel explanations for existing evidence	Grasping the meaning of technical terms	Judging the relevance of the reason(s) used	Dealing with counter-arguments
Generating solutions	Showing the structure of an argument	Generating new hypotheses	Understanding the meaning of the available evidence	Judging the adequacy of the reason(s) used	Evaluating the reasoning
Making sound decisions	Looking for assumptions in an argument	Redefining an issue so as to see it in a new way	Highlighting problems of a definition	Judging what would strengthen or weaken an argument	Looking at the need to persuade

Our unique selling proposition (USP)

**It is different
because** our model is
academically rigorous with
a decade of research most
notably with the university
of Cambridge and most
recently with LSE

PISA

LSE

AASCU

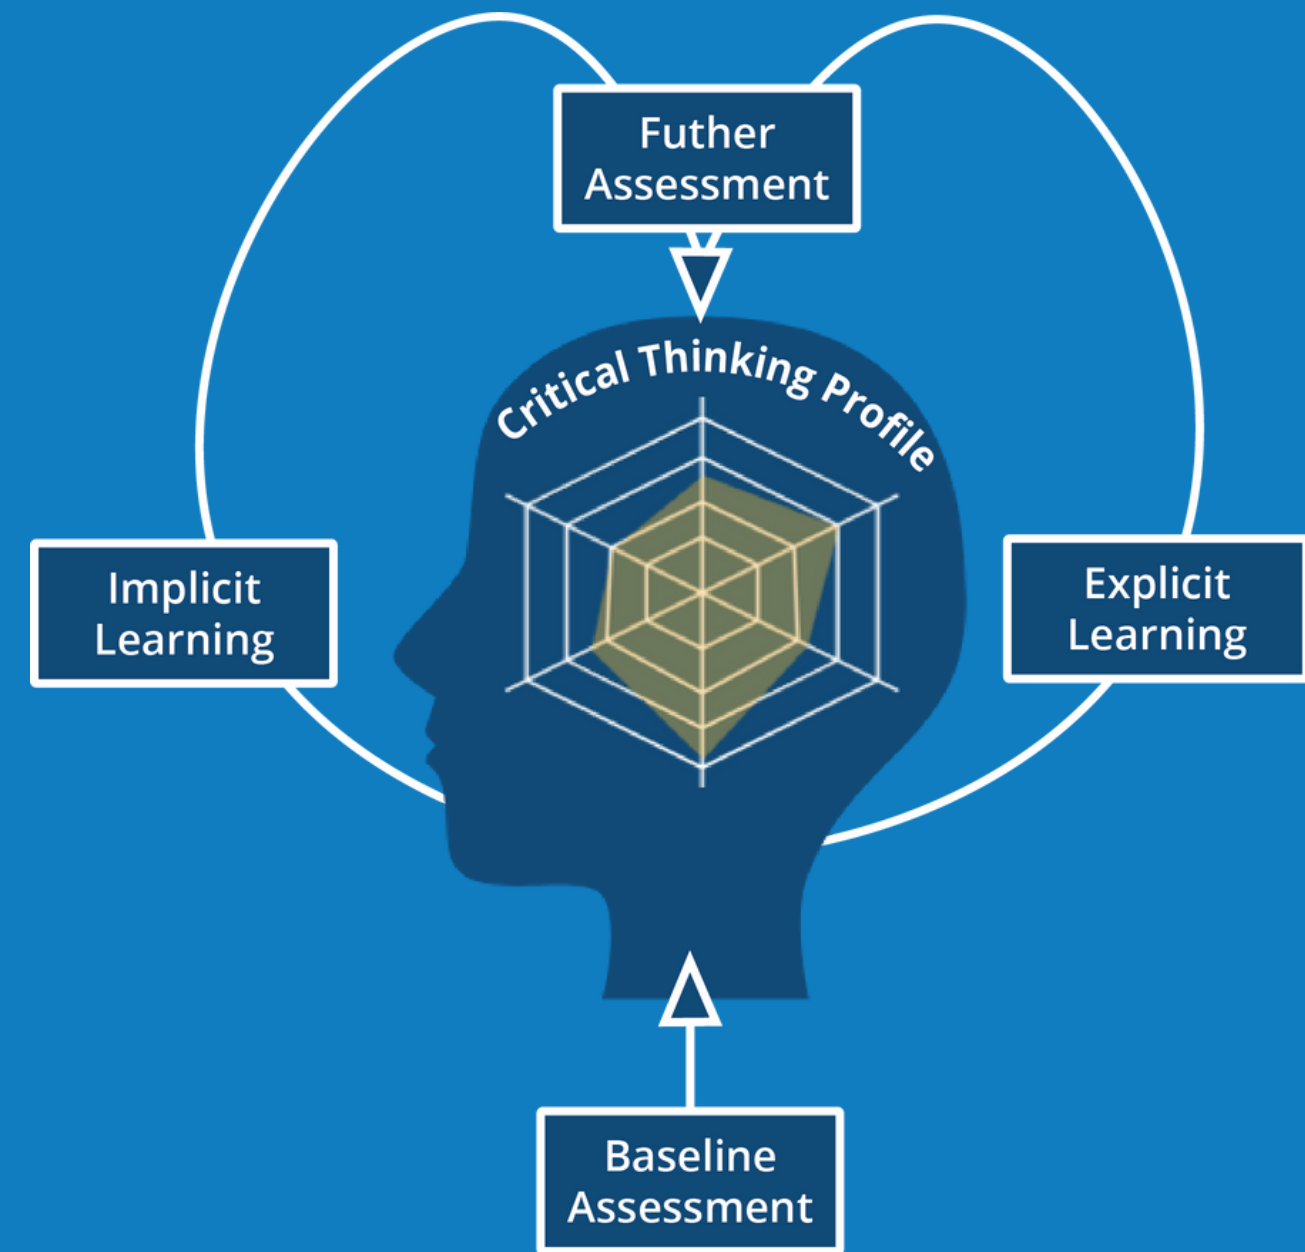

Community Colleges for
International Development

Local Access • Global Opportunities

Our solution

PACIER

The **PACIER** solution **uses** the PACIER model to help individuals assess their CT skills, build a baseline CT profile, choose one or two development tracks (implicit and explicit), take further assessment and make improvements to your skills and profile.

How are you going to develop your critical thinking skills

1

CRITICAL THINKING ASSESSMENT

The Macat critical thinking assessments have been designed to test each one of the PACIER skills

2

BUILD A BASELINE CT PROFILE

The Macat CT profile uses your assessment scores in the six PACIER skills to create a baseline CT profile that get you going

3

IMPLICIT + EXPLICIT DEVELOPMENT

AN unlimited access to the Macat iLibrary which comprises 220 analyses of great works and CT learning resources

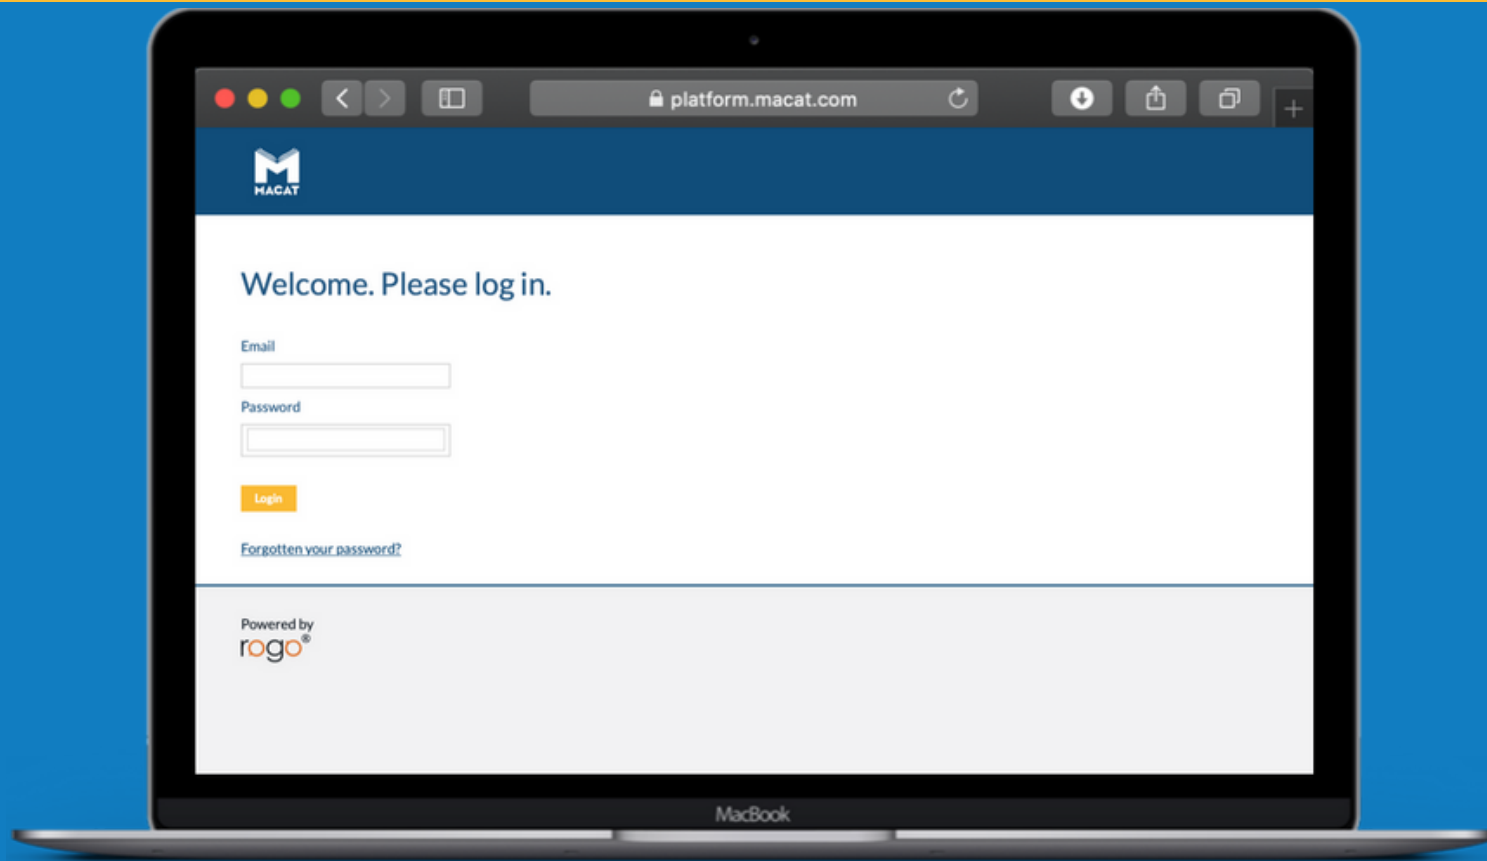

4

ASSESS AGAIN & DEVELOP CT PROFILE

If you want to be a great critical thinker you need to assess skill retention, improvement and decay, which will help you develop your CT profile

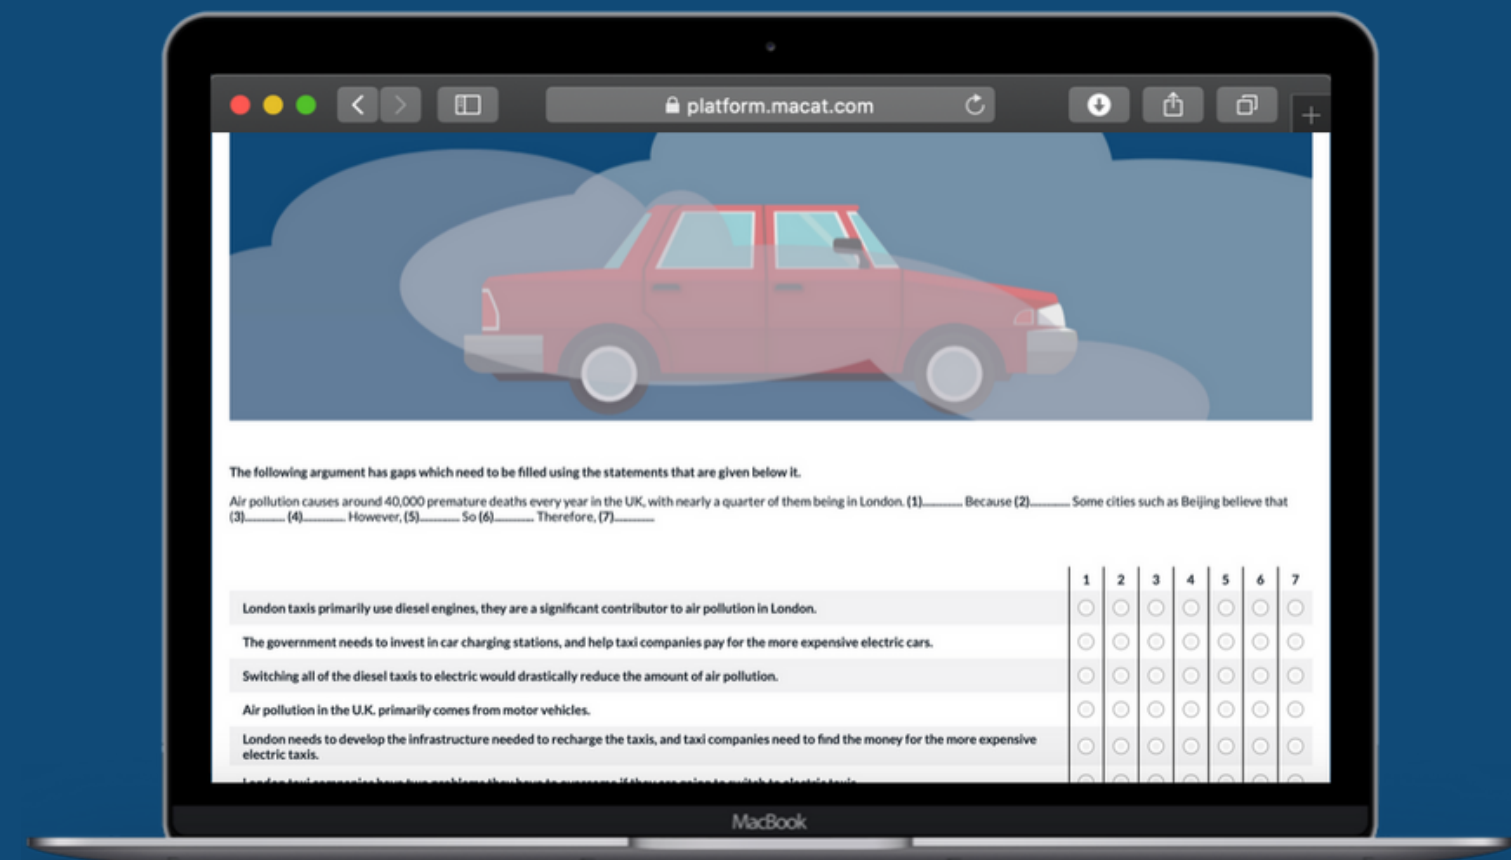

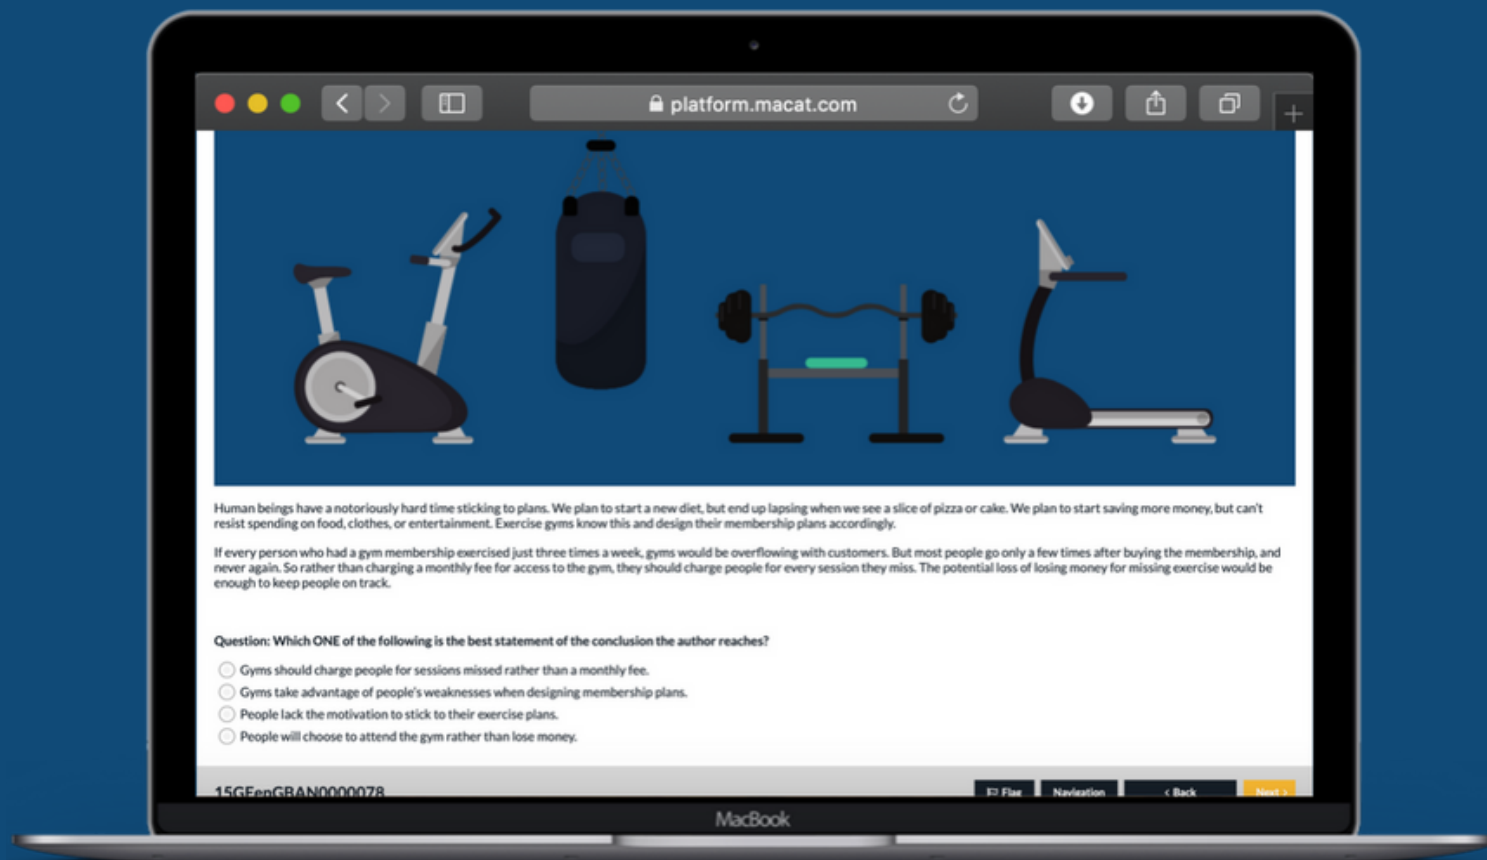

PACIER multi-skill and single-skill assessments

Multi-skill assessment

Single-skill assessment

1. This gives you your overall critical thinking score according to the last test taken
2. This clearly allows you to compare your results between different skills
3. The skills map is our users' favourite analytic and allows users to look at how they think.
4. Current Activity shows you how far through your CT course you are
5. This bar graph allows you to compare yourself to your class, cohort, or function and Macat's entire CT network.
6. You are able to look at where you rank among your peers
7. You are easily guided on to your next activity for further CT development.

OVERVIEW OF THE MACAT iLIBRARY

Implicit CT development

Written by academics

The analyses have all be written by post-doctoral students specialised in that field from the world's top universities.

Breadth and depth

The iLibrary covers 220 titles across 15 different disciplines

Flexibility

The iLibrary allows you to engage with the works in a variety of ways including video, audio and ibook.

The next video will talk you through how you can make the most of the Macat iLibrary...

Macat iLibrary Walkthrough

collective origins."

ERNEST GELLNER'S
NATIONS AND NATIONALISM

About our Videos

Macat's videos are ideal starting points for exploration. In just 3-4 minutes, each animated film introduces you to a crucial problem - and then to one great thinker's solution to it.

We use the power of analogy to ensure that even the most difficult concepts are broken down and explained clearly, in terms that everyone can understand.
